

API DOCUMENTATION

- **check-eligible**

GET <http://127.0.0.1:8000/api/customers/check-eligible/{id}>

DESCRIPTION

Check if customer eligible to participate or not.

QUERY PARAMETERS

id: Id of customer which is checked (required)

RESPONSE

200: {"message": "Congratulation, you're eligible to participate. Please submit selfie photo with ABC product within 10 minutes to claim the redeem code."}

403: {"message": "Sorry, you're not eligible to participate."}

- **validate-photo**

GET <http://127.0.0.1:8000/api/customers/validate-photo/{id}>

DESCRIPTION

Check if the photo submitted by customer is valid or not.

Will return an exception if customer isn't eligible.

Since the image recognition API is still developed, customer with odd id will return valid and even id will return false for the photo validation.

QUERY PARAMETERS

id: Id of customer which photo is validated (required)

RESPONSE

200: {"message": "Congratulation, this is your voucher redeem code.", "code": "ni82Ksd921"}

403: {"message": "Sorry, the photo you submitted isn't valid."}

403: {"message": "Sorry, you've reached the photo submission time limit."}
